

List of colors: A–F

Colors are an important part of visual arts, fashion, interior design, and many other fields and disciplines.

The following is a **list of colors**. A number of the color swatches below are taken from domain-specific naming schemes such as X11 or HTML4. RGB values are given for each swatch because such standards are defined in terms of the sRGB color space. It is not possible to accurately convert many of these swatches to CMYK values because of the differing gamuts of the two spaces, but the color management systems built into operating systems and image editing software attempt such conversions as accurately as possible.

The [HSV](#) (hue, saturation, value) color space values, also known as [HSB](#) (hue, saturation, brightness), and the [hex triplets](#) (for [HTML web colors](#)) are also given in the following table. Some environments (like [Microsoft Excel](#)) reverse the order of bytes in hex color values (i.e. to "BGR"). Colors that appear on the [web-safe color palette](#)—which includes the sixteen [named colors](#)—are noted.^[1] (Those four named colors corresponding to the neutral greys have no *hue* value, which is effectively ignored—i.e., left blank.)
